

Advantages of Equal-Sector Weight Investing

With the S&P 500 Index reaching extreme levels of concentration risk among the largest holdings, now is the time to consider an equal-sector weight strategy on the S&P 500 to take advantage of the possible broadening out of market returns.

June 30, 2025

S&P 500 Equal-Sector Weight Investing May Offer Advantages Over Equal-Stock Weight

As investors look to diversify away from the market-cap-weighted S&P 500 that has become a proxy for seven mega-cap companies, an equal-sector weight approach to US large-cap investing has historically outperformed an equal-stock weight approach with less volatility over every timeframe.

Equal-Sector Weight on the S&P 500 Historically Provides Excess Returns Over Equal-Stock Weight

See page 4 for standardized performance of the ALPS Equal Sector Weight ETF (EQL).

Question:

What % of stocks in the S&P 500 Index, since its inception, have outperformed the Index?

Answer:

Less than 31% of stocks have outperformed the Index, while over 69% have underperformed.

Diversification Doesn't Need to Come at a Cost

Both equal-sector and equal-stock weighting methodologies reduce the heavy concentration risk of the mega-cap companies in the S&P 500, however, equal-sector weighting provides an advantage by preserving the weights of the higher market-cap leaders within each sector while equal-stock weight tends to overemphasize the lower market-cap laggards within each sector. Equal-sector weighting shows a better balance of returns between the top and bottom quartiles, relative to equal-stock weighting.

Contribution to Return (% of Index Return)

The ALPS Equal Sector Weight ETF (EQL)

The ALPS Equal Sector Weight ETF (EQL) equal-weights 11 S&P 500 sector ETFs—the Select Sector SPDR ETFs—to reduce the S&P 500’s risky overweight to the Information Technology sector and place more emphasis on the real economy in sectors like Energy, Utilities, Real Estate and Materials. Conversely, equal-stock weighting on the S&P 500 will overweight sectors that hold more companies, resulting in a similar S&P 500 sector composition that actually detracts from diversification with the high correlation of returns of the companies in each sector.

Question:
Over the last ten years, what is the average dispersion between the top and bottom performing stock in the S&P 500?

Answer:
The average dispersion between the top and bottom performing stock in the S&P 500 has been over 230%.

EQL’s Equal-Sector Methodology May Lead to a Smoother Ride for Investors

More Diversification, Less Volatility

As the S&P 500 continues to drift away from a balanced representation of US large-cap companies, investors may want a better way to access the “Un-Magnificent” 493 stocks in the Index. The ALPS Equal Sector Weight ETF (EQL) provides greater exposure to the bulk of the US large-cap universe, while demonstrating less volatility and smaller drawdowns than an equal-stock weighted portfolio on the S&P 500 that tends to witness greater peaks and valleys in performance caused by inordinate sector bets.

Important Disclosures & Definitions

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. To obtain a prospectus containing this and other information, call 1-866-759-5679 or visit www.alpsfunds.com. Read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemable.

Performance data quoted represents past performance. Past performance is no guarantee of future results; current performance may be higher or lower than performance quoted.

All investments are subject to risks, including the loss of money and the possible loss of the entire principal amount invested. Additional information regarding the risks of this investment is available in the prospectus.

Diversification does not eliminate the risk of experiencing investment losses.

The Fund's investment performance, because it is a fund of funds, depends on the investment performance of the Underlying Sector ETFs in which it invests.

An investment in the Fund is subject to the risks associated with the Underlying Sector ETFs that comprise the Underlying Index. The Fund will indirectly pay a proportional share of the asset-based fees of the Underlying Sector ETFs in which it invests.

The Fund employs a "passive management" - or indexing - investment approach and seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index. Unlike many investment companies, the Fund is not "actively" managed. Therefore, it would not necessarily sell or buy a security unless that security is removed from or added to the underlying index, respectively.

NYSE Equal Sector Weight Index: consists of a strategy that holds all active Select Sector® SPDR® ETFs in an equal-weighted portfolio.

S&P 500 Index: widely regarded as the best single gauge of large-cap US equities. The index includes 500 leading companies and covers approximately 80% of available market capitalization.

S&P 500 Equal Weight Index: the equal-weight version of the widely-used S&P 500. The index includes the same constituents as the capitalization weighted S&P 500, but each company in the index is allocated a fixed weight.

One may not invest directly in an index.
