

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <https://www.alpsfunds.com/exchange-traded-funds/ACES>. You can also get this information at no cost by calling 866.759.5679, by sending an e-mail request to info@alpsfunds.com, or by contacting your financial intermediary. The Fund's prospectus and statement of additional information, each dated March 31, 2026, along with the Fund's most recent annual report dated November 30, 2025, are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website, phone number or e-mail address noted above.

INVESTMENT OBJECTIVE

The Fund seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index, the CIBC Atlas Clean Energy Index (ticker symbol NACEX) (the "Underlying Index").

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table example below.**

Annual Fund Operating Expenses (*expenses that you pay each year as a percentage of the value of your investment*):

Management Fees	0.55%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.55%

Example

The following example is intended to help you compare the cost of investing in the Fund with the costs of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same each year.

	One Year	Three Years	Five Years	Ten Years
Although your actual costs may be higher or lower, based on these assumptions your costs would be:	\$56	\$176	\$307	\$689

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in

annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year ended November 30, 2025, the Fund's portfolio turnover rate was 39% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund employs a "passive management" – or indexing – investment approach designed to track the performance of the Underlying Index. The Underlying Index utilizes a rules-based methodology developed by CIBC National Trust Company (the "Index Provider"), which is designed to provide exposure to a diverse set of U.S. and Canadian companies involved in the clean energy sector including renewables and clean technology. The clean energy sector is comprised of companies that provide the products and services that enable the evolution of a more sustainable energy sector. Clean energy business segments include, but are not limited to, the following activities: (i) renewable energy sources, including solar power, wind power, hydroelectricity, geothermal energy, biomass, biofuels, and tidal/wave energy, (ii) clean technologies, including electric vehicles, energy storage, lithium, fuel cell, smart grid, and energy efficiency technologies and (iii) other emerging clean energy activities and technologies.

The Underlying Index is compiled by the Index Provider and may be comprised of U.S. or Canadian companies. In order to be eligible for inclusion in the Underlying Index's Index Universe (defined below), a company's stock must be traded on one or more major U.S. or Canadian securities exchanges, be based in the U.S. or in Canada, have a minimum float-adjusted market capitalization and minimum average daily trading value thresholds established by the index rulebook of at least \$300 million, and have a minimum median average daily trading liquidity of greater than \$3 million over the last 60 trading days prior to the selection date, and the company must derive a majority of its value from clean energy business segments (as defined above). Such eligible companies shall be defined as the "Index Universe." All equity securities meeting the above criteria are selected for inclusion in the Index Universe.

From the Index Universe, it is the intent of the Index Provider to include at least 30 stocks that meet the Index criteria. The eligible stocks that are selected for inclusion in the Index's portfolio are weighted according to each stock's float-adjusted market-capitalization. The index weight of the largest stock is capped at 5% as of the rebalance date, and the excess weight is redistributed proportionally over the remainder of the Underlying Index. As of December 31, 2025 the Underlying Index consisted of 37 securities.

The Underlying Index is reconstituted and rebalanced quarterly on the third Friday in March, June, September and December. The Index Provider's Index Committee reviews and approves all changes to the Underlying Index as well as regularly reviews the constituent criteria and index construction guidelines based on a proprietary, rules-based research process.

The Fund will invest at least 80% of its net assets in securities that comprise the Underlying Index.

PRINCIPAL INVESTMENT RISKS

Investors should consider the following risk factors and special considerations associated with investing in the Fund, which may cause you to lose money. The relative significance of each risk factor summarized below may change over time and you should review each risk factor carefully because any one or more of these risk factors may result in losses to the Fund.

Investment Risk. An investment in the Fund is subject to investment risk, including the possible loss of the entire principal amount that you invest.

Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The values of equity securities, such as common stocks and preferred stock, may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political and social conditions, inflation (or expectations for inflation), deflation (or expectations for deflation), changes in the general outlook for corporate earnings, global demand for particular products or resources, market instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events, changes in interest or currency rates, recessions, supply chain disruptions, or adverse investor sentiment generally. Equity securities generally have greater price volatility than fixed-income securities. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural or man-made disasters or events, country instability, and infectious disease epidemics or pandemics.

Clean Energy Sector Risk. Obsolescence of existing technology, short product cycles, falling prices and profits, competition from new market entrants and general economic conditions can significantly affect companies in the clean energy sector. In addition, intense competition and legislation resulting in more strict government regulations and enforcement policies and specific expenditures for cleanup efforts can significantly affect this sector. Risks associated with hazardous materials, fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, the success of exploration projects and tax and other government regulations can significantly affect companies in the clean energy sector. Also, supply and demand for specific products or services, the supply and demand for oil and gas, the price of oil and gas, production spending, government regulation, world events and economic conditions may affect this sector. Currently, certain valuation methods used to value companies involved in the clean energy sector, particularly those companies that have not yet traded publicly, have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to increase further the volatility of certain clean energy company share prices.

Consumer Discretionary Sector Risk. The Fund may invest a portion of its assets in securities issued by companies in the consumer discretionary sector in order to track the Underlying

Index's allocation to that sector. These companies may be adversely affected by fluctuations in supply and demand and changes in consumer spending.

Industrials Sector Risk. The Fund may invest a portion of its assets in securities issued by companies in the industrials sector in order to track the Underlying Index's allocation to that sector. Stock prices for the types of companies included in the industrial sector are affected by supply and demand both for their specific product or service and for industrial sector products in general. Government regulation, world events and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies.

Utilities Sector Risk. The Fund may invest a portion of its assets in securities issued by companies in the utilities sector in order to track the Underlying Index's allocation to that sector. Stock prices for companies in the utilities sector are affected by supply and demand, operating costs, governmental regulation, environmental factors, liabilities for environmental damage and general civil liabilities, and rate caps or rate changes. The value of regulated utility equity securities may tend to have an inverse relationship to the movement of interest rates. In addition, natural disasters, terrorist attacks, government intervention or other factors may render a utility company's equipment unusable or obsolete and negatively impact profitability. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Information Technology Sector Risk. The Fund may invest a portion of its assets in securities issued by companies in the information technology sector in order to track the Underlying Index's allocation to that sector. Market or economic factors impacting information technology companies and companies that rely heavily on technology advances could have a major effect on the value of stocks in the information technology sector.

Micro-Capitalization Company Risk. Micro-cap stocks involve substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile. The shares of micro-cap companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Small- and Mid-Capitalization Company Risk. Smaller and mid-size companies often have narrower markets, less liquidity, more limited managerial and financial resources and a less diversified product offering than larger, more established companies. As a result, their performance can be more volatile, which may increase the volatility of the Fund's portfolio.

Large Capitalization Company Risk. The large capitalization companies in which the Fund invests may underperform other segments of the equity market or the equity market as a whole.

Concentration Risk. The Fund seeks to track the Underlying Index, which itself may have concentration in certain regions, economies, countries, markets, industries or sectors. Underperformance or increased risk in such concentrated areas may result in underperformance or increased risk in the Fund.

Risks Related to Investments in the Solar Energy Companies.

Solar energy companies typically face intense competition, short product lifecycles and potentially rapid product obsolescence. These companies may be significantly affected by fluctuations in energy prices and in the supply and demand of renewable energy, tax incentives, subsidies and other governmental regulations and policies. Investors should take notice of the distinction between implemented government policy based on legislation and less guaranteed commitments which may be aspirational, subject to political risk, and difficult to enforce. These companies are also heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. Solar energy companies may be adversely affected by commodity price volatility, changes in exchange rates, imposition of import controls, availability of certain inputs and materials required for production, depletion of resources, technological developments and labor relations. A decline in the price of conventional energy such as oil and natural gas could have a materially adverse impact on solar energy companies. Renewable energy resources may be highly dependent on government policies that support renewable energy generation and enhance the economic viability of owning renewable electric generation assets. Additionally, adverse environmental conditions may cause fluctuations in renewable electric generation and adversely affect the cash flows associated with solar energy companies.

Canadian Investment Risk. The Fund may be subject to risks relating to its investment in Canadian securities. Investments in securities of Canadian issuers involve risks and special considerations not typically associated with investments in the U.S. securities markets. The Canadian economy is very dependent on the demand for, and supply and price of, natural resources. There is a risk that any changes in natural resources sectors could have an adverse impact on the Canadian economy. Additionally, the Canadian economy is heavily dependent on relationships with certain key trading partners including the United States, countries in the European Union and China. Because the United States is Canada's largest trading partner and foreign investor, the Canadian economy is dependent on and may be significantly affected by the U.S. economy. Reduction in spending on Canadian products and services or changes in the U.S. economy may adversely impact the Canadian economy. The expanding economic and financial integration of the United States, Canada, and Mexico through the North American Free Trade Agreement ("NAFTA"), or its successor, the United States-Mexico-Canada Agreement ("USMCA"), has made, and will likely continue to make, the Canadian economy and securities market more sensitive to North American trade patterns. In addition, certain sectors of Canada's economy may be subject to foreign ownership limitations. This may negatively impact the Fund's ability to invest in Canadian issuers. Because the Fund will invest in securities denominated in foreign currencies and the income received by the Fund will generally be in foreign currency, changes in currency exchange rates may negatively impact the Fund's return. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.

Growth Investment Risk. Growth stocks tend to be more volatile than certain other types of stocks and their prices usually fluctuate more dramatically than the overall stock market. A stock with growth characteristics can have sharp price declines due to decreases in current or expected earnings.

Non-Correlation Risk. The Fund's return may not match the return of the Underlying Index for a number of reasons, including operating expenses incurred by the Fund not applicable to the Underlying Index, costs in buying and selling securities, asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, cash flows or operational inefficiencies.

Issuer-Specific Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

Non-Diversified Fund Risk. The Fund is considered non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund. As a result, changes in the market value of a single investment could cause greater fluctuations in share price than would occur in a diversified fund.

Return of Capital Risk. A portion of the Fund's distributions are expected to be treated as a return of capital for tax purposes. Returns of capital distribution are not taxable income to you but reduce your tax basis in your Fund Shares. Such a reduction in tax basis will result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares.

Fluctuation of Net Asset Value. The net asset value ("NAV") of the Fund's Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the Shares on the NYSE Arca Exchange, Inc. (the "NYSE Arca"). The Adviser cannot predict whether the Shares will trade below, at or above their NAV. To the extent securities held by the Fund trade in a market that is closed when the exchange on which the Fund's shares trade is open, there may be deviations between the current price of a security and the last quoted price for the security in the closed foreign market. These deviations may in turn lead to wider bid-ask spreads or premiums/discounts for Fund shares with the result that investors may receive less than the underlying value of the Fund shares when they sell their Fund shares or pay more than the underlying value of the Fund shares when they purchase their Fund shares.

Index Management Risk. Unlike many investment companies, the Fund is not "actively" managed. Therefore, it would not necessarily sell a security because the security's issuer was in financial trouble unless that security is removed from the Underlying Index.

Quantitative and Qualitative Methodology Risk. The Index Provider uses certain quantitative and qualitative methodologies to help assess the criteria of issuers to be included in the Underlying Index, including information that may be based on assumptions and estimates. Neither the Fund nor the Adviser can offer assurances that the quantitative and qualitative methodologies will provide an accurate assessment of included issuers.

FUND PERFORMANCE

The following bar chart and table provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for certain time periods compare with the average annual returns of the Underlying Index, an additional index and an index that represents a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

Total return figures assume reinvestment of dividends and capital gains distributions and include the effect of the Fund's recurring expenses. Updated performance information is available online at www.alpsfunds.com or by calling 866.759.5679.

Annual Total Returns

(calendar years ended 12/31)

Highest Quarterly Return	44.54%	12/31/20
Lowest Quarterly Return	-22.86%	6/30/22

The after-tax returns presented in the table below are calculated using highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Average Annual Total Returns

For periods ended December 31, 2025

	1 Year	5 Year	Since Inception (June 28, 2018)
Return Before Taxes	25.78%	-15.69%	4.71%
Return After Taxes on Distributions	25.56%	-15.84%	4.53%
Return After Taxes on Distributions and Sale of Fund Shares	15.30%	-10.88%	3.68%
CIBC Atlas Clean Energy Index* (reflects no deduction for fees, expenses or taxes)*	25.77%	-15.73%	4.92%
S&P 1000 Index* (reflects no deduction for fees, expenses or taxes)	7.04%	8.57%	8.28%
Bloomberg US 1000 Index* [†] (reflects no deduction for fees, expenses or taxes)	17.51%	13.47%	14.54%

* Index performance shown in the table is the total return, which assumes reinvestment of any dividends and distributions during the time periods shown.

[†] Broad-based securities market index.

INVESTMENT ADVISER

ALPS Advisors, Inc. ("ALPS Advisors" or the "Adviser") is the investment adviser to the Fund.

PORTFOLIO MANAGERS

Ryan Mischker, Senior Vice President, Portfolio Management & Research, and Charles Perkins, Associate, Vice President, Portfolio Management & Research of ALPS Advisors, Inc., are responsible for the day-to-day management of the Fund. Mr. Mischker has served in such capacity since the Fund's inception in 2018. Mr. Perkins has served in such capacity since March 2024.

PURCHASE AND REDEMPTION OF SHARES

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at a market price. Shares of the Fund are listed for trading on NYSE Arca under the ticker symbol ACES and because Shares trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than NAV (i.e., a premium) or less than NAV (i.e. a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid/ask spread").

Recent information, including information about the Fund's NAV, market price, premiums and discounts, and the bid/ask spreads, is included on the Fund's website at www.alpsfunds.com.

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Adviser or other related companies may pay the intermediary for the sale of Shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
