

MORNINGSTAR GROWTH ETF ASSET ALLOCATION PORTFOLIO

ALPS VARIABLE INVESTMENT TRUST

Ticker: Class I (N/A) and Class II (GETFX)

Summary Prospectus May 1, 2025

Before you invest, you may want to review the Portfolio's prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's prospectus, reports to shareholders, and other information about the Portfolio, including the statement of additional information, online at <https://www.alpsfunds.com/variable-insurance-trusts/getfx>. You can also get this information at no cost by calling 1-866-432-2926, by sending an e-mail request to morningstarportfolios@alpsfunds.com, or by contacting your insurance company. The Portfolio's prospectus and statement of additional information, each dated May 1, 2025, along with the Portfolio's most recent annual report to shareholders dated December 31, 2024, are incorporated by reference into this summary prospectus.

INVESTMENT OBJECTIVE

The Portfolio seeks to provide investors with capital appreciation.

FEES AND EXPENSES OF THE PORTFOLIO

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.** The table does not reflect expenses incurred from investing through a separate account or qualified plan and does not reflect variable annuity or life insurance contract charges. If it did, the overall fees and expenses would be higher.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	Class I	Class II
Management Fee	0.45%	0.45%
Distribution and/or Service (12b-1) Fees	0.00%	0.25%
Other Expenses	0.07%	0.07%
Acquired Fund Fees and Expenses	0.10%	0.10%
Total Annual Fund Operating Expenses ⁽¹⁾	0.62%	0.87%

⁽¹⁾ The operating expenses in this fee table will not correlate to the expense ratio in the Portfolio's financial statements (or the financial highlights in its prospectus) because the financial statements include only the direct operating expenses incurred by the Portfolio, not the indirect costs of investing in the Underlying ETFs.

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year, you reinvest all dividends and capital gains distributions and that the Portfolio's operating expenses remain the same. After one year, the Example does not take into consideration the Adviser's and Sub-Adviser's agreement to waive fees or reimburse expenses. The Example does not include expenses incurred

from investing through a separate account or qualified plan. If the Example included these expenses, the figures shown would be higher.

Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I	\$63	\$198	\$346	\$774
Class II	\$89	\$277	\$482	\$1,072

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 27% of the average value of the Portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Portfolio invests, under normal circumstances, at least 80% of its net assets plus the amount of any borrowings for investment purposes, in securities of exchange-traded funds (each, an "Underlying ETF" and collectively, the "Underlying ETFs"). The Portfolio will notify you in writing at least 60 days before making any changes to this policy. For the purposes of this 80% investment policy, net assets are measured at the time of purchase. The Portfolio is a "Fund-of-Funds" and seeks to achieve its investment objective by investing primarily in a portfolio of Underlying ETFs. Each Underlying ETF, in turn, in an attempt to approximate the investment performance of its benchmark, invests in a variety of U.S. and foreign equity, debt, commodities, money market securities, futures, and other instruments. The investment policies of the various Underlying ETFs are described generally in the section called "Information about the Underlying ETFs" in this Prospectus.

The Portfolio typically expects to allocate its investments in Underlying ETFs such that 20% of such allocation is invested in Underlying ETFs that invest primarily in fixed-income securities and money market instruments ("Fixed-Income Underlying ETFs") and approximately 80% of such allocation is invested in Underlying ETFs that invest primarily in equity securities of large, medium and small sized companies, and may include other investments such as commodities and commodity futures ("Non-Fixed Income Underlying ETFs"). However, under normal market conditions, the Portfolio may, from time to time, invest approximately 5-35% of such allocation in Fixed-Income Underlying ETFs and 65-95% of such allocation in Non-Fixed Income Underlying ETFs.

PRINCIPAL RISKS OF INVESTING IN THE PORTFOLIO

The main risks of investing in the Portfolio are below. Like all investments in securities, you risk losing money by investing in the Portfolio. Any investment in the Portfolio is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. Additional Information on the Portfolio's Principal Investment Risks can be found on page 42 of the prospectus.

Asset Concentration Risk. To the extent that the Portfolio holds positions in Underlying ETFs that invest in a particular sector or asset class, the Portfolio is subject to an increased risk that its investments in that particular sector may decline because of changing expectations for the performance of that sector.

Conflicts of Interest Risk. The Portfolio is subject to certain potential conflicts of interest arising out of the activities of its service providers. For example, although the Sub-Adviser does not currently anticipate holding shares of such funds, the Trust's distributor currently provides distribution services to several ETFs which could be purchased as an Underlying ETF. If this situation arises, the Adviser will waive a portion of the advisory fee equal to the portion of the distribution fees attributable to the assets of the Portfolio invested in such ETFs. Similarly, the Sub-adviser is a wholly owned subsidiary of Morningstar, Inc. ("Morningstar"), who along with its affiliates, are engaged in the business of providing ratings and analysis on financial products, such as the Portfolio. A potential conflict exists since Morningstar could be providing ratings and analysis on financial products that are sub-advised by the Sub-Adviser. The Sub-Adviser and Morningstar have adopted procedures that address this situation.

Equity Securities Risk. Equity securities in which the Fund invests may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of macro-economic or other factors that affect securities markets generally or factors affecting specific industries, sectors or companies in which the Fund invests.

ETF Risks. Underlying ETFs are subject to the following risks: (i) the market price of an Underlying ETF's shares may trade above or below net asset value; (ii) there may be an inactive trading market for an Underlying ETF; (iii) the Underlying ETF may employ an investment strategy that utilizes high leverage ratios; (iv) trading of an Underlying ETF's shares may be halted, delisted, or suspended on the listing exchange; and (v) the Underlying ETF may fail to achieve close correlation with the index that it tracks.

Fixed Income Securities Risk. A rise in interest rates typically causes bond prices to fall. The longer the duration of the bonds held by a fund, the more sensitive it will likely be to interest rate fluctuations. Duration measures the weighted average term to maturity of a bond's expected cash flows. Duration also represents the approximate percentage change that the price of a bond would experience for a 1% change in yield. For example: the price of a bond with a duration of 5 years would change approximately 5% for a 1% change in yield. The price of a bond with a duration of 10 years would be expected

to decline by approximately 10% if its yield was to rise by +1%. Bond yields tend to fluctuate in response to changes in market levels of interest rates. Generally, if interest rates rise, a bond's yield will also rise in response; the duration of the bond will determine how much the price of the bond will change in response to the change in yield.

The Fund's investments in fixed-income securities may decline in value because of changes in interest rates. As nominal interest rates rise, the value of fixed-income securities held by the Fund are likely to decrease.

Fixed-Income Underlying ETF Risks. A Fixed-Income Underlying ETF's investments will expose the Portfolio to certain risks that may have an adverse effect on the Portfolio's performance. These risks include (i) **Credit Risk**, (ii) **Change in Rating Risk**, (iii) **Corporate Debt Risk**, (iv) **Duration Risk**, (v) **Emerging Markets Risk**, (vi) **High-Yield Risk**, (vii) **Interest Rate Risk**, (viii) **Mortgage-Backed Securities Risk**, (ix) **Municipal Securities Risk**, (x) **Senior Loan Risk**, (xi) **Sovereign Debt Risk**, and (xii) **U.S. Government Securities Risk**.

Fund-of-Funds Risks. The Portfolio is a "Fund-of-Funds" that invests in Underlying ETFs, and the Portfolio's shareholders will indirectly bear its proportionate share of any fees and expenses of the Underlying ETF in addition to the Portfolio's own fees and expenses. As a result, your cost of investing will be higher than the cost of investing directly in the Underlying ETFs and may be higher than mutual funds that invest directly in stocks and bonds.

Management Risk. Any errors in the Sub-Adviser's judgment in setting the Portfolio's asset allocation ranges may result in significant losses in the Portfolio's investment in such security, which can also result in possible losses overall for the Portfolio.

Market Risk. Market risk refers to the risk that the value of securities held by the Portfolio may decline due to daily fluctuations in the securities markets that are generally beyond the Adviser's control, including inflation, supply chain disruptions, real or perceived adverse economic or political conditions throughout the world, war or political unrest, changes in the general outlook for corporate earnings, changes in interest or currency rates, natural disasters, the spread of infectious illness, including COVID-19 and its variants, or other public issues or adverse investor sentiment generally affect the securities and derivatives markets. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. In a declining stock market, stock prices for all companies (including those in the Portfolio's portfolio) may decline, regardless of their long-term prospects.

Market Timing Risk. The Portfolio may invest in shares of Underlying ETFs which in turn may invest in securities that may be susceptible to market timing or time zone arbitrage. Because the Portfolio is unable to monitor the Underlying ETFs' policies and procedures with respect to market timing, performance of the Underlying ETFs may be diluted due to market timing and, therefore, may affect the performance of the Portfolio.

Non-Diversification Risk. The Portfolio is non-diversified under the Investment Company Act of 1940, and the Underlying ETFs in which the Portfolio invests may also be non-diversified. This means that the Portfolio and Underlying ETFs have the ability to take larger positions in a smaller number of issuers than a Portfolio or Underlying ETF that is classified as “diversified” and the value of the Portfolio’s shares may be volatile and fluctuate more than shares of a diversified fund that invests in a broader range of securities.

Non-Fixed Income Underlying ETF Risks. A Non-Fixed Income Underlying ETF’s investments will expose the Portfolio to certain risks that may have an adverse effect on the Portfolio’s performance. These risks include (i) **Equity Securities Risk**, (ii) **Large-Cap Companies Risk**, (iii) **Small-Cap Companies Risk**, (iv) **Foreign Securities Risk**, (v) **Emerging Markets Risk**, (vi) **Commodity Risk**, and (vii) **Real Estate Investment Trust (REIT) Risk**.

Non-U.S. Securities Risk. Investments in securities of non-U.S. issuers involve risks not ordinarily associated with investments in securities and instruments of U.S. issuers. Non-U.S. securities exchanges, brokers and companies may be subject to less government supervision and regulation than exists in the U.S. Dividend and interest income may be subject to withholding and other non-U.S. taxes, which may adversely affect the net return on such investments. There may be difficulty in obtaining or enforcing a court judgment abroad. In addition, it may be difficult to effect repatriation of capital invested in certain countries. When investing in securities issued by non-U.S. issuers, there is also the risk that the value of such an investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates.

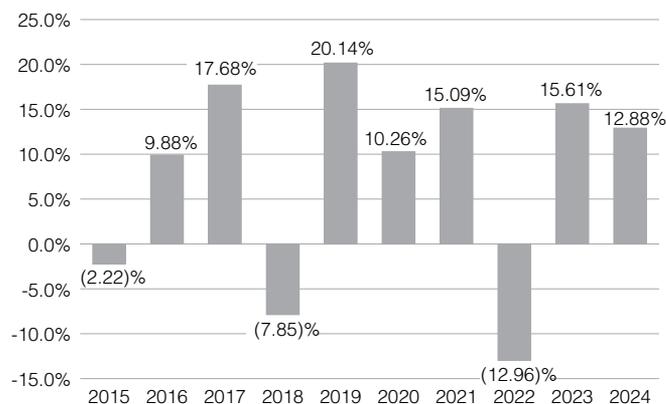

PERFORMANCE

The bar charts and tables on the following pages provide an indication of the risk of investing in the Portfolio by showing changes in the Portfolio’s Class I performance from year to year and by showing how the Portfolio’s average annual returns for one year, five years and ten years compared with those of a widely recognized, unmanaged index of securities, as appropriate. The 56% Morningstar US Market Extended TR Index / 24% Morningstar Global Markets ex-US NR Index USD/ 15% Bloomberg U.S. Universal TR USD/ 3% FTSE WGBI NonUSD USD/ 2% ICE Bank of America Merrill Lynch (“BofAML”) Treasury 3 Month TR Index is the Portfolio’s primary benchmark.

Class II shares and Class I shares would have similar annual returns because all Classes of shares are invested in the same portfolio of securities, although annual returns will differ to the extent the Classes do not have the same expenses. Currently, the annual expense ratio of the Class I shares is lower than the estimated expense ratio of the Class II shares. Accordingly, performance would have been lower if Class II expenses were reflected. The bar charts and performance tables assume reinvestment of dividends and distributions. Returns do not reflect separate account, insurance contract or qualified plan fees and/or charges. If such fees and charges were taken into account, returns would be lower. The Portfolio’s past

performance (before and after taxes) does not necessarily indicate how it will perform in the future. Best Quarter and Worst Quarter figures apply only to the period covered by the chart. Updated performance information is available on the Portfolio’s website at www.alpsfunds.com or by calling 1-866-432-2926.

INVESTMENT ADVISER AND SUB-ADVISER

ALPS Advisors, Inc. is the investment adviser to the Portfolio and Morningstar Investment Management LLC is the investment sub-adviser to the Portfolio.

PORTFOLIO MANAGERS

Jared Watts, Portfolio Manager. Mr. Watts joined Morningstar Investment Management in 2006. Mr. Watts has managed the Portfolio since its inception in 2007.

Steve Tagarov, CFA®, Portfolio Manager. Mr. Tagarov joined Morningstar Investment Management in 2014. Mr. Tagarov has managed the Portfolio since 2019.

Messrs. Watts and Tagarov have joint and primary responsibility for the day-to-day management of the Portfolio's portfolio.

TAX INFORMATION

The Portfolio's distributions are generally not taxable if you are investing through a tax-deferred arrangement, such as a variable insurance contract. Withdrawals from tax-deferred arrangements are subject to special tax rules. If the Portfolio's distributions are made to arrangements that do not provide for non-taxable earnings or tax-deferral (e.g., certain registered and unregistered separate accounts), the distributions will generally be taxed as ordinary income, capital gains, or qualified dividend income. For information regarding the tax consequences of insurance contract ownership, you should consult the prospectus for the particular insurance contract you own.

FINANCIAL INTERMEDIARY COMPENSATION

This Portfolio is only offered as an underlying investment option for variable insurance contracts and to qualified plans. The Portfolio and its related companies may make payments to sponsoring insurance companies, their affiliates or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing insurance companies to include the Portfolio as an underlying investment option in a variable insurance contract. In addition, these payments may be a factor that another financial intermediary considers in including the Portfolio as an investment option under a qualified plan. The prospectus or other offering documents for variable insurance contracts or plans may also contain additional information about these payments.
